## Data Field Descriptions

**Studbook ID** – Unique number assigned to each individual in the studbook. The studbook number is a permanent number.

**GAN** – Global Accession Number; unifying ‘key record’ under which all animal data for that individual is tracked.

**Current Location** – Indicates the current location of a living animal or the last known location of a dead/LTF/released individual.

**Current Local ID** – Indicates the individual’s local ID identifier at its current holding institution if living, or its local ID identifier at its last known holding institution if dead/LTF/released.

**Sex** – Male, female, undetermined.

**Birth/Hatch Date** – This field indicates the date of an animal’s birth/hatch. There is a birth/hatch date for every individual. If there is any estimate surrounding this date, it will be reflected in this field.

**Current Status** – Indicates whether the individual is living, dead, released, undetermined (LTF), etc.

**Sire/Dam** – Numbers reported in this field indicate the Studbook ID of an animal’s parents, when those parents are known. ‘WILD’ indicates that an animal was wild-caught and its parents are unknown, wild individuals. ‘UND’ indicates that the parentage of that animal is undefined. ‘MULTX,’ where X is a number, indicates that there are several possible parents, but the specific parent could not be determined. The possible parents within any given MULT are tracked within ZIMS and will be listed when you expand the ‘Parent’ field for that individual.

**Age** – If individual is still alive, this number indicates age of individual at time of data export. If individual is no longer alive/tracked in the SB, indicates age at time of death/LTF/release.

**Birth/Hatch Type** – Indicates whether the individual was born/hatched in the wild or a captive environment. Undetermined indicates the birth/hatch type is not known.

**Event Type** – This field documents the movements (i.e. transactions) of individual animals from the first location to the current or last known location. This includes ‘Birth/Hatch,’ ‘Transfer,’ ‘Death,’ ‘Go LTF’ (Lost to Follow up), ‘Return from LTF,’ and ‘Release.’

**Date** – This field documents the date that any given event occurred. Each event has a date associated with it. If there is any estimate surrounding this date it will be reflected in this field.

**Location** – This field indicates the location where the event took place. Undetermined indicates that the animal exists or existed, but its location cannot be reliably confirmed.

**Local ID** – This is the number assigned by the institution in which the event took place. ‘-’ indicates that either an ID was not assigned or no information exists to indicate that an ID was assigned.

**House Name** – This field indicates the name given to the animal at a specific location. Individuals may be given a different house name each time they move to a different location.

## **Data Conventions**

No data conventions exist for this studbook.
